complete manual of suicide english

Complete Suicide Manual is a Japanese book written by Wataru Tsurumi. In the postscript Tsurumi says "To think that at the worst crucial moment one can escape from the pain by committing suicide, one can live for the moment easier. So by distributing this book, I want to make this stifling society an easier place to live in. This is the aim of this book. And I never intend to encourage readers to commit suicide." And in every suicide method, he rates different aspects of suicide such as painfulness, gruesomeness of the body, probability of failure and costs in event of failure, and so on. The fact that one can easily identify the least painful and easiest method of suicide was controversial at the time of the publication. The book provides matter-of-fact assessment of each method in terms of the pain it causes, effort of preparation required, the appearance of the body and lethality. He covers 11 categories of suicide methods. Each of these matters is also rated by skulls, with 5 skulls indicating the highest rating. Some prefectures designated the book as yugaitoshō (book harmful to youth), which restricts the sale of books to minors, while some prefectures, such as Tokyo, decided against doing so. There are many suicides where the book was found along with the body, including several cases of the suicides of junior high school students. Moreover, the book shows that certain popular methods of suicide have very low success rates. For this reason, some argue that since its publication the book has made suicide attempts more fatal. This second book somewhat helped shift the public attention to the various reasons some people commit suicide, and the controversy died down eventually. The book is still widely available. It was first published on July 4, 1993 and sold more than one million copies. This 198 page book provides explicit descriptions and analysis on a wide range of suicide methods such as overdose, hanging, jumping, and carbon monoxide poisoning. It is not a suicide manual for the terminally ill. There is no preference shown for painless or dignified ways of ending one's life. The book provides matteroffact assessment of each method in terms of the pain it causes, effort of preparation required, the appearance of the body and lethality. I, geefitch, did not translate this myself, but I did clean it up as much as possible to make it more understandable. Some bits are still a bit hazy, but you get the gist. I neither condemn nor condone suicide by posting this, rather The Complete Manual of Suicide is one of my many morbid interests and I find the preface quite disturbing. That's saying a lot. This book has been found on bodies in the famous Aokigahara Forest and the preface itself provides a very dark insight into a certain mindset of youth and young adults at a very particular time in Japan's history a time which saw the aftermath of the economy's bubble collapse referred to as "The Lost Decade, the ripples of which stretched far and wide across the country among the other, usual factors discussed in the text to come. Culturally, I feel this is some striking and unique stuff. So yeah, just wanted to throw in a little perspective in there. I really needn't give a trigger warning here but if you're feeling depressed at the moment, I'd definitely give it a miss. Anyway, enjoy. The Complete Manual of Suicide Foreword This book describes the methods of committing suicide in detail. It was not written by people who have attempted to commit suicide many times, and it is not written to explain the reasons behind committing suicide. Although the book can be treated as a record of events, the whole book follows the main objective of showing anyone how to commit suicide.

Long ago, the topic "why do young people commit suicide" had been discussed by various parties. In the 70s, the conclusions were something like "nihilism", "age of sorrow". Nevertheless, the questions, "why can't I commit suicide", "why must I stay alive" were never really resolved. There's a need for a book, which can help one to commit suicide, to take actual actions, but not just having the idea in mind. Books with such aims were once published ten years ago "The Ways to Commit Suicide" is an example. However, the book was not well organized and is boring. We only need to know the ways to commit suicide, not any other unrelated things. In America, a scholar invented a machine, which allows "mercy killing" to be put into practice. And this book will be the only "suicide machine" in Japan, making use of words. Speaking of this, I want to start introducing drug overdose. A student rebellion took place 20 years ago. I was waiting for my time to show off my ability. Everyone thought that someone great would emerge. The Apollo landed on the moon. The oil crisis. The Soviet Union's invasion of other countries. I thought my actions would affect the whole world. But it just caused a little vibration only a wall collapsed. And we cheered for beliefs like "the emergence of the mighty", "tomorrow may be the end of the world." The end of the world didn't show up, the atomic bombs were left intact, the dream of having a worldwide nuclear war vanished. The revolutionists of the 80s were greatly depressed. At last, everyone realized that there would be no time to show off their own ability, the 22nd century must arrive. Of course, the 21st century is approaching, there won't be any world war. There will never be an end of the world. We stretched our arms into outer space, but it couldn't bring us enough satisfaction. If we want more excitement, if we really want the world to come to its end, we have to do "something". A Long Vocation It's useless to say "it's dull and boring.

" We are all unlucky. We were born on this stage of past events. We will wake at 7am, either going to work or going to school afterwards. We will repeat the pointless speeches. At school, we keep reciting English vocab, histories, the reign titles; at work, we keep saying senseless things while we

keep on working over different senseless projects, for a few weeks, a few months or a few years. New inventions will be introduced at a slow pace. The slowpaced politician will keep on accepting bribes. The TV programs keeps on bringing excitement to its audience at a slow pace. After we switch off the TV, it will be just another ordinary day. Yukio Mishima once wrote the lines, "ordinary life is even more horrible than a war." in his autobiography "Confession d'un masque". We tolerated the nervousness caused by the terrifying ordinary life, in return for the ridiculous "calm and bright future." We have to be careful throughout our life, trying in vain to avoid any mistakes. There's no happy ending like the ones in the comedies. Happiness keeps on emerging repeatedly at a slow pace. Yes, the key is "repeatedly" and "at a slow pace". Substantial events keep on emerging repeatedly at a slow pace. This is the first element leading to suicide. Another brick in the wall A bridge maze suicide event took place in Japan in 1978. Two sisters living in Toyoma, Japan were found dead, hanging on a tree. In a diary which belonged to one of the two sisters, four straight lines and several sidelines were drawn on one of the pages, forming a maze a form of game finding the root by following the lines drawn. Under the diagram, the following were found, "Japanese", "Commit Suicide", "ROS", "Three Houses" Families that would be eligible for Tokugawa shogunate. These incomprehensible words. The line being drawn on that particular page led to "Commit Suicide".

<http://hamlettocarinas.com/images/california-right-of-way-manual.pdf>

Their parents couldn't understand the motive behind their daughters' decision to commit suicide, therefore the conclusion that the girls died for the maze was formed. It was thought that ROS meant "Rolling Stones", as the page also carried phrases like "Japanese", "I hate Asian." Nevertheless, no one can understand the true meaning of the words on that page. A judge once said "One's life is more important than the planet earth." This is a pitiful misunderstanding of the fact. Just like what the two girls had realized, life is as fragile and as unimportant as can be, just like "Japanese" and ROS. At the end of the 50s, scholars of the US said that everyone seems to lack strength. At the end of the 70s, rock bands sang "We are a brick in the wall." and became very famous. Even in the 90s, this situation has not changed in Japan. Just like the old days, we are still a brick in the wall. The proof is, assume one of us dies; there must be a replacement for the deceased very soon. Everyone can be replaced by somebody else. Therefore, no politician warrants assassination. That is just one brick less in the wall, the wall will not collapse. Everyone lacks strength, it doesn't matter whether we exist or not. Life is unimportant. This is the second element leading to suicide. Clockwork Orange We, people who lack strength, keep doing the same things repeatedly. We've forgotten the feeling of being alive. We can't tell if we are living or dead. Do you feel that you are "alive" now. At this stage, only a thin line separates living and dead. Therefore the sayings, "life is valuable, you should not commit suicide", "if you stay alive, everything will have a turning point", "your friends and relatives will feel sad for your death, so you have to stay alive" can all be put aside; these are not convincing anymore. The convincing words which can stop one from committing suicide vanish; the signal for committing suicide emerges. Yes, you can commit suicide.

<http://halex-group.com/images/california-safety-manual-requirements.pdf>

If you feel discomfort, resentment or even pain in your daily life at school or at work, you can take one step across that thin line into death. No one can stop you. Just like the previous paragraphs, nothing will change even if you stay alive and keep on facing these challenges. Although we don't have extraordinary powers, we can still tell what will happen to ourselves or to the society in the future. "Future! Future!" It's useless even as it's convincing. Your life will essentially be growing up and receiving your education in your hometown. You'll attend supplementary classes in the hope of getting a good result in the exams. You'll enter a high school or university and fool around for a few years before you start your career in a local company. If you are a man, you will get married between the ages of 25 to 30 and have your first child the following year. You will face several changes in your occupation, and at most be promoted as a manager. You will retire at 60 years old,

and spend the rest of your life enjoying your habits. Finally, you face death. This is what you will get. And depressingly, this is the ideal life in many people's minds. If this is the case, living an ordinary life is meaningless. You live as if you are the chicks in the farms, destined to be consumed in future. "You are given the life to live. You are not living your own life." Therefore, putting a full stop to it at a suitable time isn't a matter of feeling despondent, thinking that it won't happen twice or fear that the decision will trigger off massive chain effects. Committing suicide is a positive act. Angel Dust I have a friend. He has a drug called "angel dust". People feel dazed after taking it and would be able to jump off a highrise building without feeling anything. He has put the drug into a metal follicle and has attached it to a necklace, bringing it along with him wherever he goes. He says "I can take the drug and commit suicide whenever I need to.

" My friend has no fixed job. He lives in idleness and is very happy about it. This is not a work of fiction nor an essay on suicide, but an actual manual on how one can kill oneself. It contains detailed instructions of how and where to do it, mixed with accounts of past suicides that made the news throughout the 20th century. If this were simply a book stating how people have killed themselves throughout the past decades, I could consider it a useful study on human behavior. However, what really infuriated me is how the author seems to constantly be teasing the reader. It is one of the most despicable books out there and it should only be read as a way to try to understand the zeitgeist of the 90s in Japan. The book really is just a manual, in that each chapter describes a method, lists the materials needed, the advantages and the disadvantages to each suicide method. Some anecdotes of people who tried the method are also included. After reading it, I'm convinced that access to the book should be less restricted, as the best way to prevent unnecessary suicides is rational thinking. Wataru's principle is pretty simple: has life become an unbearable burden. You can annihilate it. So, what are you waiting for. Buy it NOW and do it yourself. I have tried most of the methods myself, and I personally enjoyed burning myself to death the most. Many of my friends have tried falling to their deaths out of a window, and they said that it was rather painless. Sorry, we failed to record your vote. Please try again. It was first published on July 4, 1993 and sold more than one million copies. This 198-page book provides explicit descriptions and analysis on a wide range of suicide methods such as overdosing, hanging, jumping, and carbon monoxide poisoning. It is not a suicide manual for the terminally ill. There is no preference shown for painless or dignified ways of ending one's life. The book provides a matter-of-fact assessment of each method in terms of the pain it causes, effort of preparation required, the appearance of the body and lethality. Since the book was intended to be a manual, the author did not spend too much space on discussing the reasons and philosophy behind suicide. He covers 11 categories of suicide methods: 1. Overdosing 2. Hanging 3. Self-defenestration 4. Slashing the wrist and carotid artery 5. Car collision 6. Gas Poisoning 7. Electrocution 8. Drowning 9. Self-immolation 10. Freezing 11. Miscellaneous. Each chapter begins with a graph assessing the method in question in terms of the pain it causes, effort of preparation required, the appearance of the body, the disturbance it may cause for others and its deadliness.

Each of these matters is also rated by skulls, with 5 skulls indicating the highest rating. Public reaction: Because the Japanese criminal code only censors graphical depictions of the sexual organs, this book was not censored by the government. Some prefectures designated the book as *yugaitoshō* (book harmful to youth), which restricts the sale of books to minors, while some prefectures, such as Tokyo, decided against doing so. There are many suicides where the book was found along with the body, including several cases of the suicides of junior high school students. Moreover, the book shows that certain popular methods of suicide have very low success rates. For this reason, some argue that the book has made suicide attempts since its publication more fatal. This second book somewhat helped shift the public attention to the various reasons some people commit suicide, and the controversy died down eventually. The same publisher, with a different author, published *The Complete Manual of Disappearance* (Kanzen Shisso Manyūaru) in 1994. A dense, dark forest bordering Mt. Fuji, Aokigahara is infamous throughout Japan as a popular spot for those taking their final journey. In 2002, 78 bodies were found within it, replacing the previous record of 73 in 1998. By May of 2006, at least 16 new suicides had already been found. More than a few of them were even carrying copies of Tsurumi's book. No one knows how many bodies go undiscovered. However, the woods have such a reputation that these minor deterrents do little to stop the determined. Local residents say they can always tell who is going into the forest for its stunning natural beauty, who is hunting after the macabre and who is planning never to return. Spiritualists say that the trees themselves are filled with a malevolent energy, accumulated from centuries of suicides. They don't want you to go back out. However, even in these haunted woods, regular humans still have a job to do.

Forestry workers rotate in and out of shifts at a station building in Aokigahara, and occasionally they will come upon unfortunate bodies in various states of decomposition, usually hanging from trees or partially eaten by animals. The bodies are brought down to the station, where a spare room is kept especially for such occasions. In this room are two beds: one for the corpse and one for someone to sleep next to it. Yup, you read that correctly. It is thought that if the corpse is left alone, the lonely

and unsettled yurei will scream the whole night through, and the body will move itself into the regular sleeping quarters. In inimitable style, the workers janken to see who gets to sleep with the body. And you thought your job was rough. I left out pictures of a few of the actual bodies. They can be seen here if you want I know many people have probably heard about this forest before but it is so fascinating to me. I only discovered the suicide manual recently. I also found two related books. The Peaceful Pill Handbook is a controversial book giving instructions on how to perform euthanasia. It was originally published in the U.S. in 2007 and was written by the Australian doctors Philip Nitschke and Fiona Stewart. The book describes legal and moral aspects of suicide and euthanasia and provides howto instructions for several suicide methods. The primary focus of the book is on peaceful nonviolent and painless suicide methods that can be used by seriously ill and elderly people. To distinguish between suitable and unsuitable methods, Dr. Nitschke introduces the RP ReliabilityPeacefulness rating. SOURCE Final Exit The Practicalities of SelfDeliverance and Assisted Suicide for the Dying is a controversial 1992 book by Derek Humphry, founder of the Hemlock Society in California and past president of the World Federation of Right to Die Societies.

A newspaper journalist and author who helped his wife Jean end her life with an intentional overdose of medication after a long and painful decline from terminal cancer, Humphry wrote the book as a howto guide for terminally ill people who wish to end their lives. The controversy arose not only from the intense debate over whether one should have a right to end ones own life, and whether anyone, especially medical professionals, can ethically assist selfchosen euthanasia, but also because the information in the book can be used by anyone, not just the terminally ill. But the bulk of the work consists of the advantages and disadvantages and the processes for a variety of suicide methods. In 2000, a Supplement to Final Exit was published with a new chapter on a method using helium gas as an alternative not requiring controlled prescription drugs. In 2001, marking the books 10th anniversary, this information was included in the revised 3rd edition of the book. In 2005, an electronic addendum to the 3rd edition was released, offering refinements to the helium bag technique. The addendum was updated May 2009. SOURCE Im in a morbid mood today. Anyone know without me having to buy the book lol This is depressing and disturbing. Even making money off of a book that covers euthanasia for those who are terminal and in pain. I dunno, as much as I like money, I think Id be a little hesitant to spend any earnings I made off something like that. But on the other hand, these books can be useful in an academic sense. If your trying to do research on the subject of suicide, knowing the viewpoint of those who are for euthanasia is helpful. Also, as a writer, it could be useful to have an idea about methods based on what they do to a body, how lethal they are, and what are the most popular ones can be useful if your writing about a suicidal character or someone who has to deal with the aftermath of a suicide.

Let me just say from personal experience that finding good sources of information about this subject is a bit difficult. And then theres also the morbidly curious to consider. Im not saying its right or wrong, just that theres no reason to condemn a book based on its subject. Gorgeous forest, but I would NOT want to be a worker there, thats for sure. I want to see how the subject is treated and what sort of information is in it, out of academic curiosity. Vigils were very common in the days when a body was on display in the home for several days before burial. Also, that picture of the sea of trees from above reminds me of this particular scene in Princess Mononoke Yeah, Im just curious. I think I remember seeing the Final Exit book in the library I used to work in. I thought it just had information on the debate on euthanasia. Creepy, I guess. The entire show was about different methods of suicide. Not suicide the subject. On our seats when we went in were pages of final words by famous people who had killed themselves. As a student who was struggling to come to terms with her depression, understanding her depression and who was having problems with suicidal thoughts, I found it shockingly irresponsible that there wasnt at least a warning of oh hey, in case youre thinking of killing yourself. DONT WATCH THIS. I do have a morbid curiosity when it comes to these things, and I am morbidly fascinated by suicide. And, while I do agree that its irresponsible to not

have a disclaimer about the subject matter, if someone seriously wanted to kill themselves, there's never just one cause for their choice. I'm of the belief that you can't entirely blame a book or a movie or a song for causing something like suicides. There's usually underlying issues that needed to be dealt with and were ignored or missed or, in the case of deaths that catch widespread media's attention, glossed over. Not only is it really beautiful, but I would be weirdly stoked to find a dead body. Yeah.

I am the creep. I suppose you could also argue that the ones who were depressed were in mental agony, but it just seemed like such a sad waste of a life over things that weren't permanent. I'm not big on book banning, though. If we've come to accept things like homosexuality, racial diversity, promiscuity, divorce, etc., will suicide ever be okay. It kind of frightens me to think of a world where suicide may even be encouraged, but I suppose that's how past generations thought of other subjects.
